

Summary

Prevalence

Despite prevalence increases for some substances in the recent CSTADS cycle, there is no evidence from Alberta that substance use increased or decreased in the last ten years.

Drugs of Choice

Alcohol, cannabis, hallucinogens and synthetic marijuana were the most frequently used substances among Albertan youth between 2006 and 2016.

Alberta vs. Canada

Changes in substance use trends were observed among Canadian students while no such finding was found among Albertan students.

Thank You!

Data used for this activity was taken from Health Canada's Canadian Student Tobacco, Alcohol and Drugs Survey (CSTADS), which was conducted for Health Canada by the Propel Centre for Population Health Impact at the University of Waterloo. Health Canada has not reviewed, approved, nor endorsed this activity. Any views expressed or conclusions drawn herein do not necessarily represent those of Health Canada.
